Responsibility

Installers are expected to install Access Control, Surveillance, Computers, Servers, and Network Infrastructure. Installers must communicate with Lead Installer or Project Manager regarding all material needs and any issues regarding the project. Installers will complete a work order at the end of each day documenting the work completed for that day. The Installers are required to relay all customer issues to the lead installer or Project Manager. A clean and well organized worksite is a must. The installer must believe in following all safety rules.
